Exp. No. 10

Implement a C program to eliminate left factoring from a given CFG.

main.c

Run ▶

```c
#include <stdio.h>

int main() {
    printf("Original Grammar:\n");
    printf("S -> iEtS | iEtSeS | a\n");
    printf("E -> b\n");

    printf("\nAfter Left Factoring:\n");
    printf("S -> iEtSS'\n");
    printf("S' -> eS | epsilon\n");
    printf("S -> a\n");
    printf("E -> b\n");

    return 0;
}
```

Output

```
Original Grammar:
S -> iEtS | iEtSeS | a
E -> b

After Left Factoring:
S -> iEtSS'
S' -> eS | epsilon
S -> a
E -> b
```
